Form Validation Task

1. Username Validation

- Ensure the username is not empty.
- Check that the username is between 3 and 15 characters long.
- Display an error message if the username is invalid.

2. Email Validation

- Ensure the email field is not empty.
- Validate the email format using a regular expression.
- Display an error message if the email is invalid.

3. Password Validation

- Ensure the password field is not empty.
- Check that the password is at least 6 characters long.
- Display an error message if the password is invalid.

4. Gender Validation

- Ensure one of the gender options (male or female) is selected.
- Display an error message if no gender is selected.

5. Language Validation

- Allow multiple language checkboxes to be selected.
- Ensure at least two languages are selected.
- Display an error message if no language is selected.

6. Phone Validation

- Ensure the phone field is not empty.
- Validate the phone number format to match Egyptian numbers (e.g., starting with 010, 011, 012, or 015 and followed by 8 digits).
- Display an error message if the phone number is invalid.

7. General Validation

- Prevent form submission if any of the above validations fail.
- Display all error messages in a user-friendly manner.
- Clear error messages when the user corrects the input.

8. Success Handling

- Display a success message when all validations pass.
